

# FREQUENT QUESTIONS

---

BIOTROHN USE

## CONTENT

- 1) How does it work?
- 2) If the current kills all pathogens, why does Biotrohn have to be used several times?
- 3) Why don't we perform generalist treatments?
- 4) What program to choose?
- 5) How long is it used?
- 6) How often should it be used?
- 7) How should electrodes be used?
- 8) Should the color of the electrodes be considered when holding them with the right or left hand?
- 9) How can electrodes be cleaned?
- 10) How long does the battery need to be charged?
- 11) How do I know how much battery power is left?
- 12) Why do I get BEEPS or the message "CONNECT LOAD" on the display?
- 13) Can I interrupt the current program to, for example, go to the toilet?
- 14) Why can "rust" appear on one of the two sleeves?
- 15) Can it always be used plugged in?
- 16) The more you increase the power, the better it will work?
- 17) By default the programs come with a power of 30% when first used. I have turned it up, but when it changes cycle the power goes down, how much percentage do you recommend, is it normal to go down when it changes cycle, is the effect the same when used at 35% versus 100% for example, is the effect the same when used at 35% versus 100% for example?
- 18) Can the Detox program be used to eliminate heavy metals?
- 19) The Biotrohn comes with a USB cable in the case to connect it to the computer, what is it for?
- 20) What is the difference between the "Universal Frequency" and "Generic Aluka" programs?
- 21) Does it replace a medical ca?
- 22) Are there any side effects?
- 23) How many times is parasite control necessary?

## 1) HOW DOES IT WORK?

In the same way that a crystal can explode at a certain frequency, parasites, fungi, viruses and bacteria have established resonance frequencies, which when attacked with these waves, die and are eliminated by our immune system. Biotrohn does not cure, but by killing excess parasites, it helps and facilitates the body to heal itself, without the need for chemicals or drugs that can affect other organs. Biotrohn kills fungi, viruses, bacteria and parasites in the organism by resonance; but it also acts by increasing the defense capacity of the immune system, since it positively polarizes the cell membranes, increasing their potential and thus improving the natural defenses of the organism.

As we already know, besides matter we are also electricity. Each entity has its own frequency, and it varies depending on whether it is a healthy cell, a pathogen or a diseased cell. Broadly speaking, Biotrohn works by releasing electrons from electrodes, which travel through the body and inactivate pathogens and toxins in their path. Speaking of electricity in general terms, parasites and diseased tissues are positively charged (= shortage of electrons). The Biotrohn introduces negatively charged electrons through the skin into the living tissues of the body causing the parasites to die by reversing polarity.

## HOW DOES IT WORK? (CONT'D)

They also help to heal diseased tissue, since healthy tissue is negatively charged. Therefore, Biotrohn is also effective in the treatment of pain. Pain involves an accumulation of hydrogen (positive ions, H<sup>+</sup>) in the area, which leads to inflammation. Bioelectricity provides negative ions (electrons) to counteract the positive hydrogen ions. Whenever there is pain, inflammation or disease in an area, the electrical charge levels are low. Biotrohn also restores healthy levels of electrical charge to the cell: about 100 millivolts (mV). Note that an aging cell has 50 mV of charge, and a cancer cell has 15 mV.

On the other hand, the electrons provided by the Biotrohn electric current help to increase the polarity of the lymph, making it flow better throughout the body. This is important because lymph circulates much more slowly than blood, as it does not have an organ to propel it as in the case of the heart. Cells depend on the lymphatic system to receive oxygen and water, as well as to eliminate the waste substances they produce.

Microcurrents also recharge energy levels at the intracellular level by increasing ATP production in the mitochondria by 500% and protein absorption of the cell by 40% to 50%. As a result, many patients have significantly increased their energy levels.

## **2) IF THE CURRENT KILLS ALL PATHOGENS, WHY DOES BIOTROHN HAVE TO BE USED SEVERAL TIMES?**

There is a simple answer: an electric current travels along the path of least resistance, it tends to flow over the surface of the organs. This means that if pathogens are present, they will only be eliminated when the electric current passes through them. This fact makes daily application necessary for some time. Dr. Clark explains in her book "The Cure for All Diseases":

"It takes three treatments to kill everything. Why? The first treatment kills viruses, bacteria and parasites. But a few minutes later, the (different) viruses and bacteria commonly return. He concluded that these had been infecting the parasites, and by killing the parasites, he released them. The second zap kills the released bacteria and viruses (from the first zap), but very soon some viruses reappear. These must have been infecting some of the last bacteria. After a third zap I have never found any virus, bacteria or parasite, even hours later. Why doesn't the virus inside the parasite die in the first zap? This may be because electricity travels on the outside of things. The parasite's virus is on the inside. (...)"

Zapping does not kill organisms that are hidden inside organs, such as those in the middle of your stomach or in your intestines. Electricity travels through the walls of the intestine or stomach, not inside its contents. So, zapping is still not perfect but it can bring immediate manifest relief, which is why everyone should have a zapper.

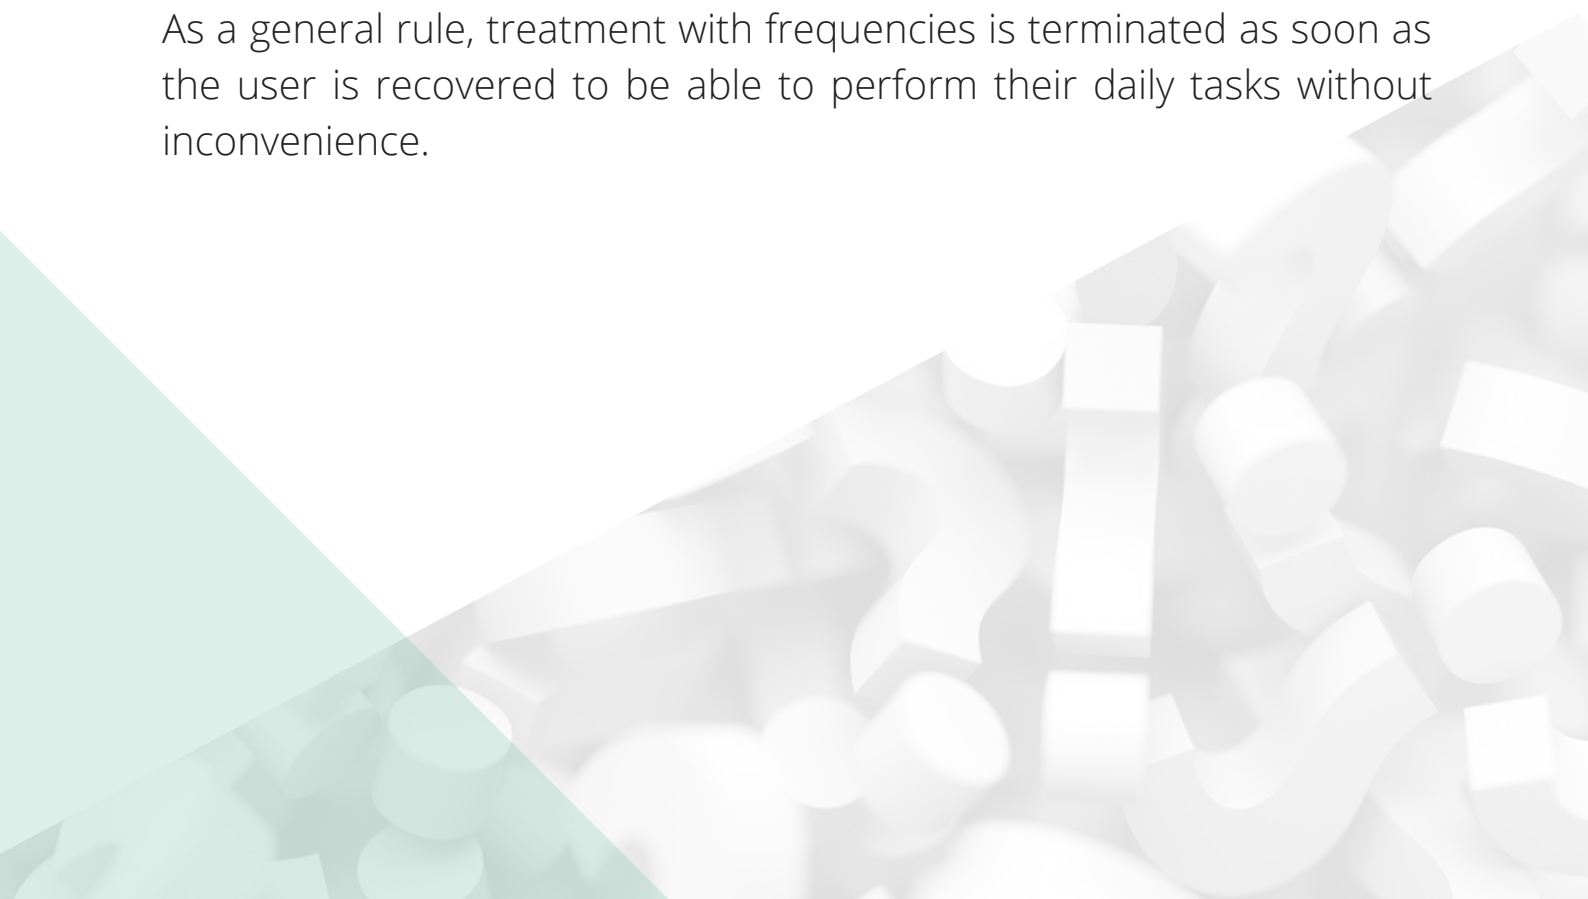

### **3) WHY DON'T WE PERFORM GENERALIST TREATMENTS?**

The origin of pathologies is different for each person. What works for one person may not work for another. It depends on factors such as genetics, lifestyle (sedentary lifestyle), diet, emotional management (stress, anxiety, ability to resolve conflicts...), hygiene...

It is also very interesting to perform a stool analysis or a stool culture, to find out what type of bacteria/parasites are in the body.

Although these analyses are sometimes limited, since only a few of them are detected (there are millions of them in our planet), they can give us a general idea of where to start. According to Dr. Hulda Clark: "There are only two causes of all diseases. No matter how long and confusing a person's list of symptoms, from chronic fatigue or infertility to mental problems, in all cases they have toxins and/or parasites in their body."

Once all this information is gathered, we can finalize a plan of action. As a general rule, treatment with frequencies is terminated as soon as the user is recovered to be able to perform their daily tasks without inconvenience.

## 4) WHAT PROGRAM TO CHOOSE?

Unlike other types of electrotherapies, the user does not need to know about programming, simply choose the program with the up and down arrows and press ENTER. All internal routines and subroutines are automatically executed according to the impedance of each person.

To choose the right program we start first with those that match the diagnosis issued by the medical professional.

Different programs can be used to cover a wider spectrum of frequencies, since there are usually symptoms that are similar but may have different causes, thus widening the field and increasing the effectiveness of the program, the field is widened and the effectiveness is increased.

If it is not clear which program to use, start with the general programs at the top of the list.

It should be noted that the frequencies can sometimes overlap, i.e. the same program can be useful for treating different ailments, or there may be a misdiagnosis and the program indicated does not seem to work.

However, it sometimes happens that when trying a program that apparently has no relation to the diagnosed ailment, it turns out that the user perceives the frequency of the electrodes very intensely, above normal. This may be an indicator that the treatment program is correct, and that the body is reacting to the frequencies of that program. (Although it is not always necessary to feel the passage of current to ensure that it is working).

## 5) HOW LONG IS IT USED?

Usually the practical use is 1 to 2 times a day. In acute cases, such as an inflammatory process, it can be applied more times if necessary. It is important to maintain a daily routine during the first five days; thereafter, depending on how the person feels, it can be treated every other day as the recovery process progresses.

Frequency treatments should preferably be done lying down and relaxed as much as possible.

The long-term duration is not limited and can be continued according to the state of well-being of each user.

Safety tests have been carried out where volunteers have been using the Biotrohn daily for 6 consecutive hours using a multitude of programs without any negative effects.

This does not mean that the more often it is applied, the better the result, but rather that a single application in a relaxed and harmonious environment is more effective than using several programs in a row in a frenetic environment while the user is distracted by other activities (such as working on the computer or using the cell phone...).

As a general rule, treatment with frequencies is terminated as soon as the user is recovered to be able to carry out his daily tasks without any inconvenience.

If the right programs are chosen and used correctly, frequency treatment can provide very rapid results. Benefits have even been reported after a single application.

application. However, noticeable benefits are usually reported after a period of time ranging from one to several weeks.

## **6) HOW OFTEN SHOULD IT BE USED?**

1st Week: every day (up to a maximum of 2 programs per day)

2nd week: 1 day on, 1 day off.

3rd week: 1 day a week.

We recommend using the same programs several days in a row, so that you can give yourself time to see which ones work best for you.

These guidelines are simply a recommendation of use, there are users who write to us using other routines and get equally beneficial effects.

## **7) HOW SHOULD ELECTRODES BE USED?**

Normally it will be used on hands and feet, with the exception of localized pain in a specific part of the body, in the latter case, the electrodes will be placed in the area of pain. If the pain is in the area below the navel, the electrodes can be placed on the ankles/feet.

CAUTION: if placed on an area other than the hands or feet, be aware that the skin is more sensitive!

It may cause burns if the intensity is turned up too high. To avoid this, make sure that the process is always pleasant, try not to increase the intensity too much (try it gradually in different sessions), and if stinging/burning appears, remove the device and place it in another area.

To treat pain in very specific areas, you can put one electrode on one hand and the other one directly on the affected area, for example: on your hip, knee, back, etc.

It depends on the experience of each user, but it is common to notice significant relief almost immediately. The important thing is that there is good contact of the electrodes on the skin, so that the frequencies the whole organism, in this way, the electricity reaches everywhere.

## **8) SHOULD THE COLOR OF THE ELECTRODES BE CONSIDERED WHEN HOLDING THEM WITH THE RIGHT OR LEFT HAND?**

In principle, the color of the electrodes on one hand or the other is indifferent.

Generally we recommend the blue (negative pole) on the right hand or in the area where the pain is, but there are users who write to us saying that they use it the other way around and get good results.

## **9) HOW CAN ELECTRODES BE CLEANED?**

The best option for cleaning the electrodes is dry baking soda, rubbing with a cloth.

## **10) FOR HOW LONG DOES THE BATTERY NEED TO BE CHARGED?**

Normally it is factory charged, but we recommend charging the battery for 8/9 hours at a time. By default, whether you charge it for 5 minutes or 2 hours, it will appear on the display as 100% charged. This is not real. As soon as you start using it, you will see that it does not last the battery. Also, if you don't charge it fully, it shortens its lifespan.

## **11) HOW DO I KNOW HOW MUCH BATTERY POWER IS LEFT?**

In order to display the battery status, it has to be running and a program is running.

Then press the "LEFT" button, and it will display the battery status.

## **12) WHY DO I GET BEEPS OR THE MESSAGE "CONNECT LOAD" ON THE DISPLAY?**

When this message appears or beeps sound, it is not because the Biotrohn needs to be connected to the mains.

Make sure that the electrodes are securely attached to the cables and plug. If it beeps, the connection between the electrodes and the end user may be faulty:

1. Hold the electrodes tightly, especially at the beginning (in winter they are usually very cold), then as soon as you make a connection, you can loosen them.
2. Play with increasing the intensity to the level that you consider more comfortable so that there is a better passage of current.
3. You can try several days in a row with the "Universal Frequency" program which

Some users have had to use it for up to a month, for extreme cases where it is not possible to use other programs because the connection is lost.

4. Try to hold the electrodes better, as they have to be in permanent contact with your hands or skin. In case the beeps do not stop/the message does not disappear, the Biotrohn may not recognize the optimal resistance of your body and you should moisten your hands for better conductivity.

It is best to surround the electrodes with a wet wipe, this will probably reduce the amount of longitudinal waves and increase the amount of scalar transverse waves.

The water used must be seawater or contain salt, so that conductance is present. An electrode can also be immersed in a container with salt/sea water for greater efficiency.

At the end it is recommended to wash the hands or feet (depending on the case) with salt or sea water.

It can happen when the hands are dry or the person lacks hydration. It is important to drink water and stay well hydrated.

### **13) CAN I INTERRUPT THE CURRENT PROGRAM TO, FOR EXAMPLE, GO TO THE TOILET?**

The program can be interrupted, but it is not recommended. If you still have to interrupt, you have to press the UP, DOWN and ENTER buttons, but when you turn it on again it will not stay exactly where you left it. Each program has what we call subroutines, when we turn it on again, it will resume at the beginning of the subroutine in which you were, thus avoiding starting the program from the beginning.

### **14) WHY CAN "RUST" APPEAR ON ONE OF THE TWO BIOTROHN SLEEVES?**

The fact that traces of oxide remain on the wipes suggests that the electrolysis is taking place correctly, i.e. it is not bad but quite the opposite, although it is "ugly". In the other electrode this does not usually happen because one generates  $H^+$  ions and the other  $OH^-$ , one oxidizes and the other reduces. On the other hand, the manufacturer of the electrodes assures and provides documents that it is food grade aluminum, that is to say that they are good. It is not that the gauzes wetted in water increase the scalar waves, but they improve the connectivity between the device and the end user, so it works even better if it is wetted in salt water because the higher salt content provides greater conductivity to the fluid. Also if it does not make a good connection at a low intensity, you have to turn it up.

### **15) CAN IT ALWAYS BE USED PLUGGED IN?**

It is not necessary to use it plugged in. You can plug it in if you see that you need to finish a program that you have half finished and you are going to run out of battery. As soon as you finish that program, be sure to give it a full 8/9 hour charge.

## **16) THE MORE YOU LOWER THE POWER, THE BETTER IT WORKS?**

To answer this question, it is important to know what microcurrents are:

They consist of electrical voltage with a given voltage: There is a broad consensus that the human mentality is characterized by the belief that "the more the better". In biology, this idea has very little validity and in many cases the effect is often quite the opposite.

Think, for example, of the distribution of hormones: the right (small) amount is of vital importance. An excess can have catastrophic consequences. The professional naturopath A. E. Baklayan observed time and again during bioenergetic tests that compatible programs, i.e. the so-called "harmonic vibration wellness programs", which emit extremely low voltages, showed the best results. In this case, less was always more. From then on, he systematically used these low voltages and found that his patients noticed a much more intense effect.

patients noticed a much more intense effect than usual. The Arndt-Schultz law states that mild stimulation increases physiological activity and very strong stimulation suppresses or destroys physiological activity.

activity. Microcurrents are therefore low-intensity electrical currents that resemble the body's own natural current. The electric current used in therapy with varying frequencies of microcurrents is considerably higher than that of the body's own natural current.

The electric current used in therapy with variable microcurrent frequencies is considerably lower than in any previous kind of electrotherapy, using resonance as the main factor, which is the key to its effectiveness.

Biological compatibility has been achieved with these weak current frequencies to emulate the normal functioning of the body, so that the repair response in the tissues is triggered and enhanced. The common electrical impulses of the cells are restored, consequently, pain subsides and repair begins.

**17) BY DEFAULT THE PROGRAMS COME WITH A POWER OF 30% WHEN FIRST USED. I HAVE TURNED IT UP, BUT WHEN IT CHANGES CYCLE THE POWER GOES DOWN, HOW MUCH PERCENTAGE DO YOU RECOMMEND, IS IT NORMAL TO GO DOWN WHEN IT CHANGES CYCLE, IS THE EFFECT THE SAME WHEN USED AT 35% VS. 100% FOR EXAMPLE?**

Yes, each time you change subroutine it returns to the default 30%, if that program has never been used.

The changes are stored in the frequency memory for the next time that program is used.

The percentage depends on each user. There are people who are very sensitive to electricity and have to set it to the minimum and others at maximum power do not even notice it. In fact, there are programs where the frequencies are so low that they are not even noticeable, but that does not mean that they are not having a beneficial effect. The power to increase the intensity is designed to improve the conductance, as there are people who do not detect them and there are constant beeps and that is why you have to increase the intensity. The perfect time is when you notice a gentle tingling.

**18) CAN THE DETOX PROGRAM BE USED TO ELIMINATE HEAVY METALS?**

The Detox program is to purify the body of toxins, especially those related to toxins originating from the waste substances of viruses/bacteria/parasites or toxins in the body, so it is also likely to have some action on the elimination of heavy metals, but not at the intracellular level.

## **19) THE BIOTROHN COMES WITH A USB CABLE IN THE CASE TO CONNECT IT TO THE COMPUTER, WHAT IS IT FOR?**

When we receive the Biotrohns at our offices, the manufacturer sends them with empty memory. We use that USB to program them. This is done only once and the Biotrohn's memory is filled with the 135 programs.

is filled with all 135 programs, unlike other zappers on the market, which come with only a few programs and you have to buy them separately.

It is also useful in case of a power outage. In this case you can contact us and we will inform you the steps to follow. Do not connect it to the computer, as you run the risk of deprogramming it.

## **20 WHAT IS THE DIFFERENCE BETWEEN THE "UNIVERSAL FREQUENCY" AND "GENERIC ALUKA" PROGRAMS?**

"Universal Frequency" is a generalist program that you use when you "do not know what to wear" because you do not want to treat any specific pathology and you are only looking to harmonize your cells. It is about frequencies that induce cellular coherence in a global way, harmonizing the organism from the DNA itself.

Aluka comes from "Andreas LUdwig KAlcker" in honor of its programmer. They are sequences from which he has created the others, let's say it is the sweep program from which he started to program the rest. Their difference is that the first one makes a superficial reset through systems, tissues and organs and the Universal Frequency is more focused on the cellular vibratory level, we could say that it is more "micro" than "macro".

## 21) IS IT A SUBSTITUTE FOR MEDICAL CARE?

Absolutely no such claim can be made. This device is a microfrequency generator, as described in the research of Dr. Hulda Clark and other researchers whose objective is to restore health.

As distributors, we are not authorized to guarantee benefits from the use of this device. It is complementary in your health treatments, not a substitute for medical treatment. It must be taken into account that there is still a lot of research to be done in the application of frequencies in pathologies for the organism.

It is the responsibility of whoever uses it and recommends it, the final result obtained. There are countless testimonials from users confirming the recovery of various pathologies, but studies have not yet been carried out to confirm each and every one of these statements, and the different conditions under which these results have been obtained.

## 22) ARE THERE ANY SIDE EFFECTS?

"Generally, there are no side effects, since being micro currents does not influence bodily functions.

***Note: it should not be used by people wearing pacemakers or during pregnancy, as we do not know how dead parasites and toxins can influence the baby's health.***

In very sensitive persons, mild skin irritation may occur as a reaction to the electrodes or to the current itself. In the event of redness, itching, stinging during or after application of the electrodes, change the area of application, as there are areas of skin that are very sensitive. The appearance of mild reactions such as fatigue, thirst, loss of energy or headaches is a positive sign, showing that the pathogens are being eliminated and the body reacts by detoxifying itself. However, if strong reactions appear, this is a sign that the body is being overdemanding with elimination. In these cases the application should be reduced.

## **23) HOW MANY TIMES IS PARASITE CONTROL NECESSARY?**

Deworming is a periodic and permanent work, since we are in continuous contact with viruses/bacteria/parasites. The periodicity of these practices and the quality of our nutrition will determine the degree of parasitic invasion with which we live and the consequences we experience.

Deworming is always good and we all need it. But if we only deworm (whether with herbs, food or frequencies), we will be generating parasite mortality and this toxic material must be administered through organs already collapsed due to the parasitic invasion that we are fighting. Therefore, it is important to have depurative organs, it is important to have clean and well-functioning depurative organs. In this sense, the key is to adopt healthy practices.

It is interesting to cleanse the organs (intestines, liver, kidneys), purify internal fluids (blood, lymph), oxygenate the internal environment (deep breathing, physical movement), take digestive breaks (fasting) and eat a diet as varied and natural as possible (local, organic products...).

We emphasize this last point, we are what we eat, so it makes little sense to kill parasites if at the same time we are stimulating their development through a diet with excess of acidic foods, dairy, flour, refined foods, meats, starches, etc. The effectiveness of the cleansing process depends on us.

MEDALAB
