## BASIC PRINCIPLES

### HISTORY

PLASMATROHN® technology is based on the work of Dr. Rife, Tesla and Dr. Lachowsky, referring to their research with frequencies that began in the 1920s and 1940s and showed amazing results in bone cancer and other chronic diseases. While Dr. Rife and others used to use frequency to eliminate bacterial and viral infections, the focus of our software is somewhat different.

The healthy body is an organism in which all cells are able to communicate coherently with each other. Plasmatrohn® achieves this process through the resonance induction of electromagnetic pulses of high-voltage plasma.

Depending on the correction frequency, its strength and duration, the cells enter into self-resonance. This self-resonance effect is responsible for the observed increase in mitochondrial activity, as well as biophotonic activity and intercellular communication. Recent studies suggest that mitochondrial activity increases internal cellular stress, which can cause mitosis in healthy cells and apoptosis in diseased cells.

# Technology

## BASIC PRINCIPLES

### MODE OF ACTION AND PURPOSE

The Plasmatron® generates electromagnetic pulses from high-voltage cold plasma. One of the leading German physicists who investigated scalar waves, Prof. Dr. Konstantin Meyl States, was able to determine in his work that the type of cell transmission is composed of information and energy. Based on this principle of natural biophysics, Plasmatron® is able to create a resonance field which, depending on the frequency and intensity parameters used, can affect different cellular structures of the body.

Plasmatrohn® is able to generate a specific reference field that influences different cellular structures depending on the frequency and intensity parameters. The basic idea is that cell communication is based on the resonance effect, i.e. not only information is sent from one cell to another via biochemical signals, but also energy is transmitted.

Plasmatrohn® can be combined and optimized with Biotrohn®. The research and development of these complex softwares was an arduous process that took several years to optimize the frequencies and intensities to perfection. Although there are a multitude of frequency generating devices on the market, there is no similar approach to the one offered by these devices: A complex system of harmonic and sub-harmonic frequency oscillations, various modifications and their intrinsic relationship over time.

Plasmatrohn® is capable of using variable frequencies, which allows the researcher to generate static plasma discharges with an accuracy of approximately 0.001 Hz in the frequency range from infrasound to ultrasonic frequencies from 1 to 900 000 Hz. Although the Plasmatron® is operated with very complex software, the functional application is extremely simple. There is no need to attend time-consuming and costly special courses. The device is completely "plug and play", so that treatment can begin immediately.

# Plasma Generator

## CONSIDERATIONS

## INTRODUCTION

The PLASMATROHN plasma generator is not designed to cure any disease. It is not a substitute for medical care, and is not a medical device.

Neither the manufacturer nor the distributors are responsible for any uses of the Plasmatrohn generator other than those stated.

## WARNINGS

- People with pacemakers should not be exposed to the effects of Plasmatrohn.
- The plasma generator is designed for laboratory work - verification of the effects of frequencies on living microorganisms (parasites, bacteria, viruses, fungi, prions, microzymes etc. ....) or as an aid in therapeutic treatment.

## DESCRIPTION OF THE DEVICE

- USB - input for programming the Plasmatrohn. (Not for end-user use.)
- Service - for service purposes only
- POWER - main switch
- Top
- Down
- V - voltmeter (informative)
- Left
- A - ammeter (informative)
- Right
- Enter - confirm

# Functioning

## START - UP

### DESCRIPTION

The Plasmatrohn is equipped with an integrated frequency generator from 1 Hz to 900 kHz. Within this range, frequency programs have been established that have effects on a large number of microorganisms and various pathologies.

The Plasmatrohn generator operates from a frequency of 1 Hz - where the complete ignition of the gases inside the tube takes place - and at about 5 Hz - where the appearance of the visible plasma discharge occurs. The maximum frequency that the Plasmatrohn can transmit without distorting the output signal is 900 kHz. It therefore works within a very wide band, from 1 to 900,000 Hz.

The frequency generated by the Plasmatrohn is transmitted through the optocoupler (which converts the electrical signal into light) to the potential section of the generator, which in turn transforms this frequency into a high voltage that ignites the gas mixture inside the plasma tube. The ignition of the gases in the tube creates the plasma, which propagates these frequencies contactlessly within 1 to 4 m of the generator, the ideal distance where the person who is to receive the treatment should be placed. Therefore, all individuals present in that environment would be benefiting from the emitted frequencies.

### CONTROLLING AND POWERING UP THE DEVICE

Connect the 230 V cable to the device, at the socket on the back of the device.

The two circuit breakers on the back of the device must be in the on position - circuit breaker levers up.

Connect the device to a 230 V outlet.

Start the device with the main "POWER" button.

(The ambient temperature and the temperature inside the device must be the same - for example, if you have just brought the device from a cool place, let it run for at least 30 minutes "idle", i.e. without turning on the generator, with only the fan on).

Manual mode - Press the "Enter" button.

Choose a preselection with the "Up" or "Down" buttons.

Start the desired program with the "Enter" button.

### DO NOT TOUCH THE PLASMA TUBE DURING OPERATION

The tube will turn on, and immediately start transmitting the required frequency to the surroundings. On the display you will see the time countdown to the end of the program. During this time, a mutual resonance (provided that the correct resonance frequency has been selected) will occur between the receiving individual and the output frequency, which according to the research of many scientists leads to its destruction of pathogens during a very short time. The Plasmatrohn plasma generator makes it possible to verify these findings in a practical way. It was developed on the basis of the findings of Dr. Royal Raymond Rife, Nikola Tesla, Dr. Hulda Regehr Clark and other no less important scientists.

# Recommendations

- 
- Never wash the plasma tube with water or detergents.
  - To clean it, use only a damp cloth, and only if the device has been disconnected from the mains.
  - If you move the unit from a cool place to a place that is at room temperature, wait at least 2 hours for the temperature of the unit and the surrounding area to equalize.
  - The plasma generator must be in horizontal position!

## Warranty

**THE WARRANTY PERIOD FOR THE ELECTRONIC FUNCTION OF THE GENERATOR IS 24 MONTHS FROM THE DATE OF SALE.**

Certificate of conformity: The device complies with all applicable standards for devices powered by the 230V/50Hz public network, in particular: EN 61326-1:06, EN 61000-3-2-06, EN 61000-3-3-95+A1:01+A2:05. Tested at the Institute for Electrotechnical Testing in Prague (state-owned company).
